
Everest Electrical Services Adds New Offerings for Luxury Finishing Touches to Home Renovations

Sydney's leading electrical service provider, Everest Electrical, has recently included new services in its lineup of offerings to cater to clients embarking on home renovation this Autumn.

Sydney, NSW (PRWEB) April 30, 2013

Fall is here and many homeowners are expected to take advantage of the milder weather to tackle both minor and major home renovations before winter creeps in. Everest Electrical, which is located in Sydney, has recently included three new services to its offerings; these aim to target clients who wish to add luxury finishing accents to their homes. These services are TV wall mounting and the installation of heated towel rail and bathroom heat lamps.

Many households these days are getting rid of their bulky entertainment centres to create a larger and more attractive space inside the home for better movement. Big TV sets are now replaced with flat screen and thin LCD or LED ones that can be mounted on an ideal flat surface such as the wall for an enhanced viewing experience. [TV wall mounting service](#) is now being offered by Everest Electrical Services to its clients. After reports came out that flat screen TVs have the tendency to teeter over tables and hurt young children, most people prefer mounting them on walls not only to create a more streamlined room layout, but more importantly, to keep the TV out of children's reach. This service offered by Everest Electrical ensures that the TV is mounted properly and securely.

“...flat screen TVs have the tendency to teeter over tables and hurt young children, most people prefer mounting them on walls not only to create a more streamlined room layout, but more importantly, to keep the TV out of children's reach...”

Also, since the coldest time of the year is coming, installing heat-emitting fixtures is something that a lot of homeowners are working towards completing, such as [bathroom heat lamps](#) and heated towel rails. Bathroom heat lamps are used as a source of heat in showers and bathrooms which can get really cold during the cooler months. Instead of using tungsten filaments which are often found in ordinary light bulbs, most heat lamps use quartz which have a resistance to electricity. "This, in turn, allows the heat lamp to produce ample amounts of infrared radiation which can provide heat to people coming out of the shower," explains Andrew Jefferys of Everest Electrical.

Meanwhile, heated towel rails are growing in popularity these days, hence Everest Electrical deemed it necessary to include the installation of these fixtures to their services. These fixtures, which only luxury hotels used to have, are now making their way into a lot of households and installation requests increase upon the onset of cooler weather. A [heated towel rail](#) in the bathroom allows people to wrap themselves up with warm and fluffy towels after a bath and it's also known to contribute to keeping the bathroom dry and free from the malodorous scent of moisture-bred bacteria. On top of these benefits, heated towel rails can also contribute aesthetically to the look of a bathroom and add value to houses.

These are all great new provisions from Sydney's leading electrical service provider; to learn more about Everest Electrical's services, visit <http://www.everestelectrical.com.au>.
